Subject: North Lily

Doug:

I did a little research and found out one company who would be willing to do the testing on old liners. This is a local consulting company, GEOCONSULTING, INC. They are usually a third party who do verification and recertification of liner repairs. He mentioned that if there is a need for it, they can do the actual testing that is after having another consultant/owner do the repair. I assume they may even do the repair too, NL need to talk to them for detail. I was told that North Lily has to come up with their own testing box (he estimated around \$650 for the box). We have worked with GeoConsultants before on number of Circle Four Farms projects that relates to liner repairs. Dennis said I can pass this information to NL. He mentioned that we may need to talk to Fred Pherson to discuss the next step if NL will not be able to follow the Order to repair and test the liner according to the approved plan. Fred is out of the office this week. Meanwhile, I will pass the number of GeoConsultants to Walt or NL, or you can. The number for GeoConsultants, Inc. is 435-586-8089, and the contact person is Mr. Joel Meyers. Also, Dave Rupp of our office supplied me with some other companies that may do the work. I will pass the list to Walt or whoever you have talked to previously regards this. I will try to contact you before I call them. Thanks Doug.
